THIS REPORT IS DIVIDED INTO TWO MAJOR SECTIONS. THE FIRST SECTION CONSISTS OF STATISTICAL SUMMARIES OF WATER FLOW DATA FOR THE NORTHWEST BOUNDARY SYSTEM AS A WHOLE AND FOR EACH ADSORBER, DEWATERING WELL, AND RECHARGE WELL IN THE SYSTEM. CORRESPONDING FLOW RATE REPORTS ACCOMPANY THE STATISTICAL SUMMARIES. THE SECOND SECTION IS A LISTING OF THE METER READINGS RECORDED BY RMA TECHNICIANS.

ALL DATA INCLUDED IN THIS REPORT RESULTED FROM METER READINGS TAKEN BY RMA PERSONNEL. ESTIMATES WERE MADE WHEN METER FAILURES OCCURRED. THE ESTIMATES WERE EITHER PROVIDED BY RMA OR MADE BY RIC PERSONNEL AND APPROVED BY THE PROGRAM MANAGER'S STAFF OFFICE AT RMA.

ROCKY MOUNTAIN ARSENAL NORTHWEST BOUNDARY FLOW RATES: OCTOBER 1985 - JUNE 1986

INTRODUCTION

This report is divided into two major sections. The first section consists of statistical summaries of water flow data for the Northwest Boundary system as a whole and for each adsorber, dewatering and recharge well in the system. Corresponding flow rate reports accompany the statistical summaries. The second section is a listing of the meter readings recorded by RMA technicians.

All data included in this report resulted from meter readings taken by RMA personnel between October 1985 and June 1986. Estimates were made when meter failures occurred. The estimates were either provided by RMA or made by RIC personnel and approved by the Program Manager's staff office at Rocky Mountain Arsenal.

Individuals requiring information on water levels for the Northwest Boundary System should reference the document titled "Water Elevation Report for the Northwest Boundary System: April 1985 Through May 1986." This document is available at the RIC Center (RIC #86157R03).

Section 1

Statistical Summaries and Flow Rate Plots

Meter readings are usually taken weekly by RMA technicians. They are not, however, taken on the first and last day of each month. It was therefore necessary to "straddle" the meter readings for each month being examined. For example, the meter for dewatering well 1 was only read once during December of 1985. In order to estimate the flow for December, the last meter reading taken during November of 1985 (November 29) was used as the starting point for the readings and the first meter reading taken during January 1986 (January 21) was used as the ending point. The total gallons pumped and the elapsed time between these two meter readings were determined. The average gallons per minute flow rate was then computed. The flow rate was multiplied by the total number of minutes in December to obtain an estimate of the total gallons processed during that month.

The first plot in this report provides information on the flow rate for the entire Northwest Boundary system. The average gallons per minute rate for the combined adsorber, dewatering and recharge well flows are plotted for monthly comparisons. The second plot is of cumulative gallons processed by the adsorbers, dewatering, and recharge wells. The third plot is of monthly adsorber flow rates. Monthly flow rate plots for all dewatering and recharge wells follow.

The abbreviations used in the statistical tables and flow rate plots are listed below.

- AD-RW DIFFERENTIAL corresponds to the difference between the adsorbers monthly total and the recharge wells monthly total.
- AD-DW DIFFERENTIAL corresponds to the difference between the adsorbers monthly total and the dewatering wells monthly total.
- DW-RW DIFFERENTIAL corresponds to the difference between the dewatering wells monthly total and the recharge wells monthly total.
- SYSTEM refers to the individual areas (adsorbers dewatering wells and recharge wells) within the main system.
- TIME SPAN is in Month, Day then Year format. It corresponds to the start and stop dates of the meter readings used to determine the flow rate for a particular month.

- TOTAL GALLONS is the number of gallons processed during the corresponding time span.
- TOTAL MINUTES is the number of minutes that elapsed between meter readings for the corresponding time span. Actual pumping times are not recorded by RMA technicians.
- AVE GAL PER MIN stands for average gallons per minute and is determined by dividing the TOTAL GALLONS by the TOTAL MINUTES.
- DATE is the month and year for which the total gallons of flow is being estimated.
- MINUTES PER MON corresponds to the total number of minutes within a particular month.
- EST GAL PER MON (estimated gallons per month) is determined by multiplying the TOTAL MINUTES for each month by the appropriate AVE GAL PER MIN rate.
- CUM GALLONS PROCESSED (cumulative gallons processed) is the current estimated gallons per month added to the previous total for cumulative gallons.

| MAY 86 | (1,573,110) | -8.24 | (2,865,110) | -15.00 | 1,292,000 | 7.96 |
| JUN 86 | (6,206,340) | -17.79 | (9,857,640) | -28.25 | 3,651,300 | 14.59 |

NOTE: The above values were calculated from Estimated Gallons Per Month. Values in parentheses indicate negative numbers. The percent difference {((RW-AD)/AD)X100} is determined by subtracting the Adsorber Estimated Gallons Per Month from the Recharge Estimated Gallons Per Month and dividing this difference by the Adsorber Estimated Gallons Per Month. The result is then multiplied by 100 to determine the percentage.

AVERAGE GALLONS PER MINUTE

SECTION 2

Section 2

Meter Readings

The abbreviations used in the printout of meter readings are explained below.

- WELL NUMBER or ABSORBER is the identifier.
- DATE is in month, day then year format.
- TIME is the time of day the meter was read based on a 24 hour clock.
- TOTAL MINUTES corresponds to the number of minutes that have elapsed from the previous meter reading to the present meter reading.
- TENS METER corresponds to the reading taken from the meter which measures in tens of gallons.
- **HUNDREDS METER** corresponds to the reading taken from the meter which measures in hundreds of gallons.
- TOTAL GALLONS for the wells is determined by adding the 10's meter and 100's meter readings together and subtracting the total for the previous meter readings from the total for the current meter readings.
 - TOTAL GALLONS for the adsorbers is determined by subtracting the previous meter reading from the current meter reading.
- NOTES correspond to comments recorded by RMA or RIC personnel.
